

m-trilogix Inc.

FIELD FORCE AND WORKFLOW AUTOMATION USING MOBILE AND WIRELESS TECHNOLOGY

m-trilogix is based in Toronto Canada with partners in the USA and a European office. We offer mobile, wireless and distributed software solutions for Sales Forces, Field Forces, Warehouse Staff, Truck and Transport Drivers, and Management. Our mobile and wireless solutions enable workers to access company information from anywhere using handheld devices. Our applications are targeted at the Consumer Goods, Distribution, Warehouse, Transport and Finance industries.

Devices: Our clients use a variety of devices including Laptops; PDA's, Blackberry and Cell phones. The applications are based on a framework which can be customized to fit a client's certain business processes. The application resides on the device and connects to a server through the internet and/or cell networks. There is an internet browser based portal to report, track and display information. The portal is connected to the application and reports on the data collected in the application.

ROI: The systems are easy and fast to use. By customizing the application to the particular business process and the specific 'points of pain', clients realize a greater ROI in a shorter period than by using an out of the box solution that does not address their particular business needs. A typical ROI should be realized within 3-6 months.
